

MASTERCLASS: One-Day Technical Training

Lightning Protection for Solar System Installations

As solar PV adoption grows, ensuring proper lightning protection is critical for system safety, performance, and compliance. This 7-hour comprehensive course equips participants with the knowledge and skills needed for lightning risk assessment, regulatory compliance, and effective protection strategies for solar PV installations.

Key Learning Objectives:

- ✓ Learn about authority submission requirements for compliance
- ✓ Explore lightning protection design principles and best practices
- ✓ Gain insights into international and local standards
- ✓ Understand lightning risk assessment and its impact on solar PV systems

Who Should Attend?

This course is ideal for M&E engineers, contractors, fresh graduates, solar PV installers, project engineers, and anyone involved in solar system design and lightning protection.

Er. Chan Heng Lim

Er. Chan Heng Lim, a veteran electrical engineer and lightning protection specialist, brings 30+ years of expertise in building development, solar PV systems, and compliance standards, making him a trusted industry trainer.
